Summary

Computer Programming student with hands-on experience building and deploying full-stack applications for clients. Strong foundation in TypeScript/JavaScript, Python, Rust and SQL, with experience in backend APIs, MongoDB, authentication, role-based access, web automation and LLM integration. Comfortable learning unfamiliar technologies, solving practical engineering problems, and working directly with clients and teammates.

EDUCATION

DEC in Computer Science Technology April 2024 - PRESENT

LaSalle College, Montreal, QC

EXPERIENCE

Freelance Software Developer May 2024 - May 2025

Remote, Upwork

- Delivered software development and UI/UX projects for clients through Upwork, translating client requirements into functional web applications and interface designs.
- **Track Construction:** Built and deployed a full-stack construction project management application using Next.js, React, TypeScript, MongoDB/Mongoose, Clerk, and Vercel.
- Designed the application's UI in Figma and implemented backend APIs, authentication, role-based permissions, project sharing, comments, files, and collaborative workflows.
- Integrated an LLM-powered project-generation feature and structured the application to keep the AI integration separated from core application logic.

Website Administrator and IT Specialist July 2021 - November 2023

Aryan Duke Parsi, Iran

- Managed WordPress content and custom HTML/CSS while supporting website administration and digital content workflows.
- Coordinated digital assets and production workflows, using Photoshop, Illustrator, Blender and CLO 3D to create and organize commercial materials.

PROJECTS

Huffman File Compressor & Decompressor - Rust

- Implemented a command-line file compression and decompression program using Huffman coding, supporting arbitrary file data rather than text-only input.
- Worked with binary data, byte-level representations, file I/O, and Huffman encoding/decoding while learning Rust's systems-oriented programming model.
- Built the command-line interface using `clap`, with separate workflows for compressing and decompressing files.

Web Scraping & Price Reporting Automation - Python

- Developed a client automation tool to collect live pricing information from three specified websites using Python and BeautifulSoup.
- Processed the extracted data and generated Excel reports, automating a repetitive data-collection and reporting workflow.

- Worked from client requirements to deliver a practical automation solution for structured web data collection.

Car Price Prediction - Python, scikit-learn, SQLite

- Collected used-car listing data from an Iranian marketplace through web scraping and stored the resulting dataset in SQLite.
- Built an introductory machine-learning workflow with scikit-learn to experiment with predicting used-car prices from collected data.
- Gained hands-on experience connecting web scraping, data storage, preprocessing, and machine-learning experimentation in a single workflow.

Factoid: Text Parser - C#

- Developed a C# text parser capable of interpreting template-based questions and generating corresponding answers.
- Implemented parsing logic and program structure to process textual input and handle different question patterns.

Technical Skills

Languages: Python, TypeScript, JavaScript, Rust, C#, Java, SQL

Web & Application Development: Next.js, React, Svelte, SvelteKit, Tailwind CSS, REST APIs

Backend & Databases: Next.js API Routes, MongoDB, Mongoose, PostgreSQL, SQLite, Clerk

AI & Data: LLM/API Integration, scikit-learn, Web Scraping, BeautifulSoup, Data Processing

Tools & Infrastructure: Git, Docker, Linux, Vercel, Figma

Design: Photoshop, Illustrator, Blender, CLO3D, Marvelous Designer

Languages

English: Fluent

French: Working proficiency

Persian: Native
